the invention have mutations in the D helix of the IL-21 molecule, and can be used to inhibit the activity of IL-21 with its cognate receptor. The IL-21 antagonists are useful for diagnosing and treating disorders involving the aberrant expression or activity of the IL-21 polypeptide, such as cancer, inflammatory and autoimmum disorders, including rheumatorid arthritis, multiple soletosis, systemic lupus erythematosus, myasthenia gravis and diabetes. The polypeptides can also be used to prepare antibodies that bind IL-21 epitopes, peptides or polypeptides, and for enhancing in vivo killing of target tissues. The present sequence is human IL-21 receptor (originally designated zalphall receptor) 8888888888888888

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 2, Application US/09191786
Patent No. 6372898
GENERAL INFORMATION:
APPLICANT: Cacalano, Nicholas A.
APPLICANT: Johnston, James A.
TITLE OF INVENTION: Mammalian Protein Variants and Methods
TITLE OF SEQUENCES: 2
CORRESPONDENCE ADDRESS:
ADDRESSEE: DNAX Research Institute
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Indels

-1- SUBCELLIAR LOCATION: Type! I membrane protein.
-1- DISPASE: Defects in IL28Gare the cause of X-linked severe combined immunodeficiency (XSCID) (MIM:300400); also known as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ď
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              agammaglobulinemia, Swiss.type i cytokine family of receptors.
SMILARITY: Belongs to the type i cytokine family of receptors.
Subfamily S.
SIMILARITY: Contains 1 fibronectin type III domain:

-!- SUBCRILULAR LOCATION: The I membrane protein.
-!- SIMILARITY: Belongs to the type I cytokine family of receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Bukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,

Also serves as an alternate accessory protein to the common cytokine receptor gamma chain for IL4 signaling with cannot replace the function of gamma chain for IL4 signaling but cannot replace the function of gamma chain for IL4 signaling with cannot replace the function of gamma chain general muscle and ovary; lowest levels in brain, lung and kidney. Also found in B-cells, T-cells and endothelial cells.

- INSUMERATIY: Belongs to the type I cytokine family of receptors. Subfamily S.
- BATABASE: NAME=PROW; NOTE=PROW 2:95-100(2001);
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This SWISS-PROT entry is copyright. -1- DOMAIN: The BOX 1 motif is important for association with JAKs.
-1- SIMILARITY: Belongs to the type I cytokine family of receptors.
-1- SIMILARITY: Contains 1 fibronectin type III domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   InterPro; Leacondong 1...

Submitted (MAR-1995) to the EMBL/Genbank/DDBJ databases.
-!- FUNCTION: This is a receptor for the anterior pituitary hormone
                                                                                                                                          prolactin.
--- SUBCELLULAR LOCATION: Type I membrane protein.
--- SIMILARITY: Belongs to the type I cytokine family of receptors.
--- Subfamily 1.
--- SIMILARITY: Contains 4 fibronectin type III domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ( POTENTIAL)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CRC64;

1. FUNCTION: This is a receptor for interleukin-4. The soluble form of the IL4 receptor may respressnt a regulatory molecule specific for II4-dependent immune responses.

1. SUBUNIT: Heterodimer of an alpha chain and a common gamma chain.

1. SUBUNIT: Heterodimer of an alpha chain and secreted.

1. ALTERNATIVE PRODUCTS:

EVent-Alternative splicing; Named isoforms=3;

Sequence 18, Application US/09935868
Patent No. US20020164690A1
Fatent No. US20020164690A1
FAPPLICANT: Regeneron Pharmaceuticals, Inc.
TITLE OF INVENTION: Receptor Based Antagonists, and Methods of Making and Using FILE REFERENCE: REG 2013D
CURRENT APPLICATION NUMBER: US/09/935,868
CURRENT FILING DATE: 2002-04-11
FALOR PAPLICATION NUMBER: PCT/US99/22045
RANDR PAPLICATION NUMBER: PCT/US99/22045
RANDR PAPLICATION NUMBER: PCT/US99/22045
RANDR FILING DATE: 1999-09-22
NUMBER OF SEQ ID NOS: 52
SOFTWARE: PatentIn Version 3.0
SEQ ID NO 18
LENGTH: 694
                                                                                                                                                                                                                                                                                                                                                       83 TNLTLHYWYKNSDNDKVQKCSHYLPSBRITSGCQLQKKRIHLYQTFVVQLQDPRBPRRQA 142
